

Monday (2 hours)

7:00-7:45 PM (45 min)

Watch Google ML Crash Course videos

- Take notes in Notion/Obsidian
- Pause to code along with examples

7:45-8:00 PM (15 min)

Break (stretch, water)

8:00-9:00 PM (60 min)

Hands-on Python ML lab

- Jupyter notebook exercises
- Scikit-learn practice (classification/regression)
- Save to GitHub repo

9:00-9:15 PM (15 min)

Daily log

- What I learned today
- Tomorrow's prep

Tuesday (2.5 hours)

8:00-8:45 PM (45 min)

Fast.ai Lesson

- Video lecture + reading

8:45-9:00 PM (15 min)

Break

9:00-10:30 PM (90 min)

Code along with Fast.ai notebook

- Build image classifier
- Experiment with parameters
- Document results in README

Wednesday (1.5 hours)

8:00-8:30 PM (30 min)

NVIDIA DLI Course

- Focus: GPU acceleration basics

8:30-9:30 PM (60 min)

Project 1 work - Crypto Price Predictor

- Fetch data from CoinGecko API
- Data preprocessing with Pandas
- Initial model training (LSTM)
- Track experiment in MLflow

Thursday (2.5 hours)

8:00-8:30 PM (30 min)

Made With ML - MLOps reading

8:30-10:00 PM (90 min)

Project 1 continued

- Model tuning
- Dockerize application
- Create FastAPI endpoint
- Test API with Postman

10:00-10:30 PM (30 min)

Write project documentation

- Update README with architecture diagram
- Document API endpoints

Friday (Rest Day)

Optional (30 min)

Light reading

- ML blog posts
- Follow ML engineers on Twitter/LinkedIn
- Relax - you earned it! 🎉

Saturday (5 hours - Deep Work Day)

9:00-9:15 AM (15 min)

Coffee + Weekly review

- Check progress against milestones
- Adjust Sunday's schedule if needed

9:15-11:15 AM (120 min)

Project 1 - Build complete pipeline

- Connect all components
- End-to-end test
- Deploy to Docker Hub

11:15-11:45 AM (30 min)

Lunch break

11:45 AM-1:45 PM (120 min)

Start Project 2 - NFT Sentiment Analysis

- Set up Twitter API
- Scrape NFT-related tweets
- Explore Hugging Face models for sentiment
- Fine-tune BERT on custom dataset

1:45-2:00 PM (15 min)

Update project board

GitHub Projects or Trello

Track tasks completed

Sunday (4 hours - Learning + Review)

10:00-11:30 AM (90 min)

Udacity Nanodegree modules

- NumPy/Pandas exercises
- Neural network theory

11:30 AM-12:15 PM (45 min)

Brunch break

12:15-1:00 PM (45 min)

Project 2 continuation

- Deploy sentiment model in Docker
- Create API endpoint

7:00-7:30 PM (30 min)

Networking

- Join MLOps Community Slack
- Introduce yourself in #introductions
- Comment on 3 LinkedIn posts in ML/AI

7:30-8:00 PM (30 min)

Weekly review & planning

- Log hours in tracking sheet
- Review learning goals
- Plan next week's priorities
- Celebrate wins!
